

3-point clamp for vertical drum lift

Product information

Drum clamp is intended for lifting and moving steel and plastic drums of different sizes in vertical position (one barrel at a time). The clamp has an adjustable grip size and it is suitable for most 200 l and 120 l standard drums, both with lids and open ones. The function of the clamp requires that the drum has a protruding strong top edge/lip under which the clamp jaws can engage. The clamp consists of three jointed grab arms, fasteners, a central frame and a fixed lifting eye to which the lifting device is attached. Three-point attachment and stabilizer arms (limited range of joint movement) prevent the upper part of a lidless drum from bending under load and they also remain automatically engaged on the drum although the clamp goes "slack" between lifts.

Grip sizes:

External adjustment holes (200 l): min-max 510-580 mm

Inner adjustment holes (120 l): min-max 410-480 mm

Features: Lifting eye inner diameter 33 mm

Material: Steel

Marking: CE-marked

Finish: Painted, yellow
